Please read 2a_number_systems.pdf if you have not yet done so.

After that, perform the following number conversions on your own:

- 1. convert 43 (decimal) to hexadecimal
- 2. convert 43 (decimal) to binary
- 3. convert A4 (hexadecimal) to decimal
- 4. convert A4 (hexadecimal) to binary
- 5. convert 10101111 (binary) to decimal
- 6. convert 10101111 (binary) to hexadecimal

If you are not sure how to carry out the above conversions, you may use this online tool:

https://www.mathportal.org/calculators/numberscalculators/decimal-binary-hexadecimal-converter.php

It shows the steps and explains how it is done.

Example 1: convert 43 (decimal) to hexadecimal

Convert number 43 from Decimal to Hexadecimal

Go to the next page for the answer:

 $(43)_{10} = (2B)_{16}$

Explanation

Step 1:

Continually divide decimal number by 16 to give a result and a remainder. Write down the remainder (in hexadecimal).

In this example we have:

Division	Result	remainder (in dec)	remainder (in hex)
43 / 16	2	11	В
2 / 16	0	2	2

Step 2:

Read the remainders from bottom to top.

Example 2: convert 43 (decimal) to binary

Convert number	43	from	Decimal	▼ to	Binary	•
Answer:						
(43) ₁₀ = (101011) ₂						
Explanation						
Step 1:						
Write down the decima	I number and continually	divide by 2 to gi	ve a result and a rema	ainder. The ren	nainder is either a 1	or a 0 .
In this example we ha	ve:					
43 / 2	result 2'	1 remaind	er	1

Example 3: convert A4 (hexadecimal) to decimal

Convert number	a4		from	Hexadecimal	•	to	Decimal	•
Answer:								
(A4) ₁₆ = (164) ₁₀								
Explanation								
Step 1:								
Start at the rightmost digit. Co with 16^2	onvert that digit to deci	mal and multiply	with 16 ⁰ (2 ⁰	= 1). Convert second digit	to deci	mal and m	ultiply with 16 ¹ , third d	igit multiply
In this example we have:								
HEX DIGIT	DEC VALUE	MULTIPLI	CATION	RESULT				
4	4	4 * 1	6 ⁰	4				
Α	10	10 * 1	16 ¹	160				
Step 2:								
Add together all products								
4 + 160 = 164								

Example 4: convert A4 (hexadecimal) to binary

Convert number	a4	from	Hexadecimal •	to	Binary	•
I						

Answer:

Example 5: convert 10101111 (binary) to decimal

Convert number 10101111 from Binary to Decimal

Answer:

 $(10101111)_2 = (175)_{10}$

Explanation

Step 1:

Start at the rightmost digit. Take that digit and multiply with 2^0 ($2^0 = 1$). Multiple second digit with 2^1 , third with 2^2 ...

In this example we have:

*	20	=	1	*	1	:	=	1
*	2 ¹	=	1	*	2	:	=	2
*	2 ²	=	1	*	4	:	=	4
*	2 ³	=	1	*	8	:	=	8
*	2 ⁴	=	0	*	16	:	=	0
*	2 ⁵	=	1	*	32	:	=	32
*	2 ⁶	=	0	*	64	:	=	0
*	2 ⁷	=	1	*	128	:	=	128
	* * * * * *	* 2 ¹ * 2 ² * 2 ³ * 2 ⁴ * 2 ⁵ * 2 ⁶	* 2^{1} = * 2^{2} = * 2^{3} = * 2^{4} = * 2^{5} = * 2^{6} =	* 2^{1} = 1 * 2^{2} = 1 * 2^{3} = 1 * 2^{4} = 0 * 2^{5} = 1 * 2^{6} = 0	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	* 2^{1} = 1 * 2 * 2^{2} = 1 * 4 * 2^{3} = 1 * 8 * 2^{4} = 0 * 16 * 2^{5} = 1 * 32 * 2^{6} = 0 * 64	* 2^{1} = 1 * 2 * 2^{2} = 1 * 4 * 2^{3} = 1 * 8 * 2^{4} = 0 * 16 * 2^{5} = 1 * 32 * 2^{6} = 0 * 64	* 2^{1} = 1 * 2 = * 2^{2} = 1 * 4 = * 2^{3} = 1 * 8 = * 2^{4} = 0 * 16 = * 2^{5} = 1 * 32 = * 2^{6} = 0 * 64 =

Step 2:

Add together all products

1 + 2 + 4 + 8 + 0 + 32 + 0 + 128 = 175

Example 6: convert 10101111 (binary) to hexadecimal

10101111

Convert number

							J									
Answ	er:															
$(10101111)_2 = (AF)_{16}$																
Explanation																
Step	1:															
Brea	k the l	binary	numb	oer int	o 'qua	artets'	. In thi	is exa	mple	we ha	ave:					
1010	1111 :	= 1010	0 1111	l												
Step	2:															
Use	the tal	ble be	low to	cove	rt eac	h qua	rtet to	its H	ex eq	uivale	nt.					
	0000	0001	0010	0011	0100	0101	0110	0111	1000	1001	1010	1011	1100	1101	1110	1111
	0 1 2 3 4 5 6 7 8 9 A B C D E F															
In this example we have:																
	1010 1111 A F															

Binary

from

to Hexadecimal

After these exercises, you should be confident to perform number conversions on your own.
