My WORKVIEW and LIFEVIEW

What is your workview and lifeview?

My workview is that financially, it should allow me to provide for my family if I were to start one in the future and pursue my hobbies to maintain a healthy work-life balance, which currently is bouldering. Furthermore, the work should challenge me to continually improve myself, enriching my mind. My lifeview is that I believe that learning does not stop at schooling and I should continually enrich and challenge myself while still savouring in the present by staying active.

VALUES

My top 5 values that I Always Value:

Stability; Independence; High Earnings Anticipated; Competition; Challenging Problems

PERSONALITY

Fill in what you know about your personality

Balanced Coordinator: I value stability, order and being careful while being disciplined, rigorous and realistic. I also have the ability to work together and achieve results. At work, I believe in efficiency and have zero tolerance for failure with an analytical approach as I enjoy clear processes with minute details. I also am able to maintain relationships by being both supportive and challenging through setting goals and taking charge. Thus, I should seek a high result-oriented environment

SKILLS

SKILLS (S)

Critical Core Skills (16 skills):

Creative Thinking Basic	Building Inclusivity Intermediate	Adaptability Intermediate	Decision Making Intermediate	Digital Fluency Basic	Collaboration Intermediate
Global Perspective Basic	Problem Solving Intermediate	Communication Basic	Sense Making Basic	Learning Agility Intermediate	Customer Orientation Basic
Transdisciplinary Thinking Intermediate	Self Management Intermediate	Developing People Basic	Influence Basic		

Technical skills:

Programming Languages: C, C#, C++, Java, Javascript, Python Front End: React.js, HTML, CSS Database: MySQL, MongoDB, PostgreSQL Others: NumPy, Pandas, Matplotlib, Seaborn, scikit-learn, TensorFlow, Git Microsoft: Word, PowerPoint, Excel, Power Query, Power BI, SharePoint

PRACTICALITY CHECK

My preferred salary range

I expect to graduate and take up a job as a software engineer. Thus my expected salary: Market Rate - 5-7k from Glassdoor. For the IT industry, not only is there the base pay, but there are also additional benefits such as allowances and company provided transport for the bigger firms, thus the pay range can fluctuate taking into account the benefits and based on my academic performance.

Level/type of responsibility I'd like

I would prefer to work in a more technical role as opposed to a managerial capacity, but I would not be completely closed off to it due to the expected higher salary that comes with it. While I have been placed in leadership positions before, it is more mentally draining and would not play to my strengths. Upon graduating, I would start out as a junior roles, where I receive instructions on how to execute plans and through the years gaining experience, would promote to senior and be the planner.

Career progression

I would like to have a healthy work-life balance to continue my hobbies and thus would not be too concerned with career progression. Furthermore, I do not seek to work in a managerial positions as I am more interested in working from a technical position. However, I would definitely seek to work my way up from a junior role to a senior role but not pay too much attention to managerial positions.

Other personal considerations

Family life: If I were to start out a family, I will pay more attention to career progression to take into account the increased financial burden. I will also take into account the increasing price of housing to decide on career progression as I seek to own a house in the next 4-6 years. Furthermore, I would like to maintain a healthy lifestyle by keeping up with my hobbies while still attaining financial freedom by 50 through planned savings and investments.

My IDEAL ENVIRONMENT

My preferred type of workmates:

1. Work focused. I prefer workmates that know how to separate personal feelings from work and thus be able to deliver work while putting aside grievances if any. 2. Technical competence. I prefer workmates that are able to push me to continually improve by being proficient at their tasks. 3. Quality focused. I prefer workmates that will point out any flaws in my work and are focused on the quality of my work.

My favourite working conditions:

1. Organised. I like a clear workflow with structures and responsibility clearly set out for each worker. 2. Quality driven. I prefer a working culture that focus on the quality of work that is put out instead of managing of relations between superiors. 3. Open communication. I believe that workers should be able to air their grievances to each other and improve the working environment without offense

My perfect place to live (now or in future):

Singapore: It has an efficient public transport system and where my family currently resides. Furthermore it is safe and have ample facility for me to maintain a healthy lifestyle. If I were to have a family, it has a good education system and a bright future outlook for the child to grow up in. It also has a retirement scheme put in place (CPF) that helps to relieve the financial burden I will face in the future upon retirement.

NEXT STEPS

PERSONAL STATEMENT

I am currently a double degree student studying computer science and economics. My current motivation to do well is to attain a well-paying job to provide for myself and my parents to repay them for bringing me up. Currently, my goal is to be a software engineer upon graduation but I am also looking to become a quantitative analyst as it aligns well with my values of analytical and working in an environment that pushes myself that pays well.

REFLECTION

Date: 01/09/24

Firstly, I have learned that my personality works well in jobs that require me to be analytical as I am more methodical and work well with details. I am more confident in working under pressure as stated by psyent test. Furthermore, my current skillset of python and the libraries involved allows me to work as a software engineer. However, I still have to improve my current skillset by getting real-life experience through internships. Furthermore, my current job goal works well with my life view
