

Inquiry on C++

Q: From your lecture today, there was the this question in the slido which states:

What is the significance of garbage collection in Java compared to C++?

and one of the correct options was :

C++ objects have destructors that are automatically called when the object goes out of scope, while Java objects rely on garbage collection.

Im confused by the answer, in particular the part where it says deconstructors are automatic because earlier you said in C++ there is a need to manage manually. Is this because C++ has both stack object allocation and heap object allocation where stack is automatic memory management but heap isn't?

Ans: We need manually call delete in **Class Destructors** in C++. But the **Class Destructors** are called **automatically** when the object goes out of scope.

Make-up quiz

- If you have a valid reason (e.g., a medical certificate) for being absent on the quiz day, please complete the short leave of absence (SLOA) using the link below:
- <https://forms.office.com/r/L47ChppB9J>
- and email Dr. Li Fang (asfli@ntu.edu.sg) to request a make-up quiz. Note that you must provide a valid reason with supporting documentation.
- The make-up quiz will be held on **November 22, from 9:30 to 10:45**. Please note that, according to CCDS policy, the make-up quiz will be **more challenging than the original**, as you will have had more time to prepare.

Q: Could you confirm whether all the questions in Quiz 2 will be multiple-choice?

Ans: Yes.

Q: Additionally, I wanted to check if the quiz will be entirely theory-based, or if there will be questions that include code snippets, where we need to determine the output or identify errors - similar to last year's format.

Ans: Both.

Q: Lastly, I would appreciate any guidance on the content distribution. Will the quiz mainly cover topics from Part 2, or should I expect an equal mix of questions from both Part 1 and Part 2?

Ans: A bit heavier on part 2. But you need all OOP knowledge even when you are working on Part 2 questions.
