

Week 3

✓ Question 1

10 / 10

Select all correct statement(s) about entrepreneurship and an ageing population.

Hide answer choices ^

- ☐ A Studies in this area have not found any relationship between entrepreneurship and ageing.
- ☒ B As the population ages, entrepreneurship may increase to a certain extent, as businesses started by people in their 50s have a good chance of success.
- ☐ C As the population ages, entrepreneurship also increases as they have more pension funds to spend on risky ventures. *D. The right entrepreneurial spirit can combine traditional inputs in an efficient manner to produce outputs.

 Feedback
Good work

ⓘ Question 2

8 / 10

According to the lecture, what is the main focus in care provision for the "well elderly" group?

Hide answer choices ^

- ☒ A Advance care planning
- ☒ B Health promotion and education
- ☐ C Palliative care provision
- ☒ D Keep them independent in the community for as long as possible
- ☐ E Restorative medicine provision

 Feedback
Palliative care is targeted at end of life elderly while restorative medicine is for those with chronic illness.

✓ Question 3

10 / 10

According to the lecture, how can an ageing population impact capital? Select all correct statements.

Hide answer choices ^

- ☐ A An ageing population is less risk averse to investment thereby increasing the amount of capital available for businesses.
- ☒ B A larger proportion of funds are located in pension funds, which offer less flexibility for individuals in terms of investment.
- ☐ C Retirement funds tend to focus on capital preservation, so there is more readily available capital for economies to tap into.
- ☒ D Retirement funds tend to be more risk averse.

 Feedback
Good work

✓ Question 4

10 / 10

Select all statement(s) that make(s) neighborhoods more accessible to seniors.

Hide answer choices ^

- ☒ A Cars need to drive more slowly
- ☒ B Apartments need to be designed for older residents
- ☒ C Roads need to be narrower
- ☐ D No changes need to be made. We should promote active and independent living by encouraging elderly to adapt to the environment around them.

 Feedback
Good work

Question 5

4 / 10

The capital available for the production side of economy may decrease in an ageing population if

Hide answer choices ^

- ☐ A Older people pay less tax
- ☒ B Older people shift savings from bank accounts into pension funds
- ☒ C Older people make more conservative and less risky investments
- ☐ D Younger people pay less tax
- ☐ E Corporations pay less tax

Feedback

Tax revenue is an important source of capital for governments to invest in production as well as in services. When banks hold fewer savings, they cannot offer as many loans to businesses. Corporations that rely on private investment for capital investment are negatively impacted when investors pursue more conservative and less risky investment opportunities. That's not correct

Final Mark Submitted 8/26/22, 11:10 AM (UTC+8)

Question 3

4 / 10

What might be some ways for the elderly to remain "economically active"? Select all correct option(s)

Hide answer choices ^

- ☒ A Paid employment
- ☐ B Volunteering in the community
- ☐ C Taking care of grandchildren or others
- ☐ D Gardening
- ☐ E Taking holiday tours of foreign countries

Feedback

Alongside taking up paid employment, the elderly can be "economically active" in many ways that are not typically considered "work". Volunteering in the community or providing care services are both substantial contributions to the local and national economy. Gardening produces food, herbs, and flowers that do not need to be purchased. Taking holidays may look like "just consumption", but consumption is also an important part of economy.

Question 4

10 / 10

Feedback

Alongside taking up paid employment, the elderly can be "economically active" in many ways that are not typically considered "work". Volunteering in the community or providing care services are both substantial contributions to the local and national economy. Gardening produces food, herbs, and flowers that do not need to be purchased. Taking holidays may look like "just consumption", but consumption is also an important part of economy.

Question 4

Week 4

Question 1

7.5 / 10

Select all correct statement(s) about changes in mortality from 1920-2019.

Hide answer choices ^

- ☐ A People did not experience much age-related disability before death in 2000s.
- ☒ B In 1920, the dying person could expect to receive medical care and support from family, friends, and communities.
- ☐ C The place of death is most often home in 2019.
- ☐ D One of the most common causes of death in the early 1900s was acute infectious diseases.

Feedback

Increased life expectancy over the past 100 years contributes to the differences in how people face death.

Question 2

10 / 10

Which of the following statement(s) accurately describe what the best advance care planning (ACP) involves? Select all correct statement(s).

Hide answer choices ^

- ☐ A A series of mandatory and legally binding conversations with one's family and doctors.
- ☒ B Patients are guided to understand and reflect upon future healthcare treatments, and then indicate their preferences regarding said treatments.
- ☒ C Nomination of a "substitute decision-maker" who can make decisions on the patient's behalf.
- ☐ D A simple checkbox exercise to select the best medical team based on quality and performance metrics.

Question 3

10 / 10

Select all correct statement(s) about changes in mortality from 1920-2019.

Hide answer choices ^

- ☐ A People experienced about 2 to 3 years of disability on average before death in the early 1900s.
- ☐ B In 2019, the dying person could expect to receive medical care and a lot of support from family, friends, and communities.
- ☐ C The place of death is most often home in 2019.
- ☒ D One of the most common causes of death in 2019 was chronic life threatening illness.

Week 6

✓ Question 1

10 / 10

Select all statement(s) that accurately describes the proof-of-stake mechanism.

Hide answer choices ^

- ☐ A A miner must expend resources on energy and equipment to win the right to create the next block
- ☐ B It involves third-party authentication to reduce the amount of money spent on energy and equipment.
- ☒ C It reduces the environmental footprint of computation, compared to proof-of-work by changing the rule of how to prove how has invested more in mining.
- ☐ D Miners' ability to validate transactions in the blockchain is associated with the proportion of the cryptocurrency they hold

 Feedback
Good work

✓ Question 2

10 / 10

Select all the benefit(s) of using a P2P (i.e., decentralized) network.

Hide answer choices ^

- ☐ A It allows users to transfer digital currency safely by being verified by a central authority.
- ☒ B It allows users to perform transactions without involving any third-party intermediaries.
- ☒ C It is cheaper to use than traditional client-server type of networks.
- ☐ D It offers high resistance to transaction censorship

 Feedback
Good work

✓ Question 3

10 / 10

What does the double-spending problem refer to? Select all correct answer(s)

Hide answer choices ^

- ☐ A When you spend \$10 to purchase two items at the total price of \$10.
- ☒ B When you spend the same virtual token of \$10 more than once to purchase items at the total price of \$30.
- ☒ C When you make two copies of a \$10 note and spend the two copied \$10 notes to purchase items at the total price of \$20.
- ☐ D When you spend the virtual token of \$10 to purchase items at the total price of \$10.

 Feedback
Good work

⚠ Question 4

4.16 / 10

Select all correct statement(s) about hash function and hash pointer.

Hide answer choices ^

- ☒ A Hash function converts a variable-length string of characters into a variable-size numerical value (i.e., a different length of numerical values).
- ☒ B A blockchain is multiple data records linked together with hash pointers.
- ☒ C A hash pointer points toward the previous block in a blockchain so that we just need to know the head of the chain to trace through the blocks one by one following the hash pointers.
- ☐ D A cryptographic hash allows to verify whether the information has been changed.

 Feedback
A hash function is a mathematical function to convert information to a fixed-size numerical value. A hash pointer stores the location information of data and attached together with a cryptographic hash to verify any change in the stored information.

Question 5

6.86 / 10

Select all statement(s) that describes the characteristics of the blockchain structure correctly.

Hide answer choices ^

- ☒ A A block chain is temper-evident, meaning that we could detect any change made to the blocks using the hash pointers
- ☐ B New data can be recorded by creating a new block and appending it to the block chain
- ☐ C It is computationally feasible to compute the private key based on the public key.
- ☐ D The older the block is, the harder it is to make changes to it without being detected

Feedback

A blockchain is a chain of data blocks linked together with hash pointers. As such, any change in the data of any block will result in a chain reaction of changing all hash values, which is practically very difficult. This property makes blockchains tamper-resistant or easy to detect any attempt to make changes.

Question 5

10 / 10

Select all statement(s) that describes the characteristics of the blockchain structure correctly.

Hide answer choices ^

- ☒ A A block chain is temper-evident, meaning that we could detect any change made to the blocks using the hash pointers
- ☐ B New data can be recorded by creating a new block and appending it to the block chain
- ☐ C It is computationally infeasible to compute the private key based on the public key.
- ☐ D The older the block is, the easier it is to make changes to it without being detected

Question 3

5 / 10

What does the double-spending problem refer to? Select all correct answer(s)

Hide answer choices ^

- ☐ A When you spend \$10 to purchase two items at the total price of \$10.
- ☒ B When you spend the same virtual token of \$10 more than once to purchase items at the total price of \$30.
- ☐ C When you make two copies of a \$10 note and spend the two copied \$10 notes to purchase items at the total price of \$20.
- ☐ D When you spend the virtual token of \$10 to purchase items at the total price of \$10.

Feedback

Double-spending problem is when an item that has been used or spent is still available for the owner so that the owner can use or spend it again. For instance, your digital photo can be sent to your family, but the photo does not disappear on your side either, and you can still access it after sending it to your family.

Question 2

10 / 10

Select all statement(s) that accurately describes the proof-of-work mechanism.

Hide answer choices ^

- ☒ A A miner must expend computing power to win the right to create the next block
- ☐ B It reduces the environmental footprint of computation, compared to proof-of-stake
- ☒ C It offers resilience to external tampering because the mining cost required to attack a proof-of-work system is very high
- ☐ D It is a trivial game that checks whether data satisfies the preset requirements.

Feedback

Good work

Question 1

10 / 10

Select all correct statement(s) about hash function and hash pointer.

Hide answer choices ^

- ☒ A Hash function converts a variable-length string of characters into a fixed-size numerical value.
- ☒ B A blockchain is multiple data records linked together with hash pointers.
- ☐ C A hash pointer is embedded in a blockchain so that we need to know all the hash pointers to trace through the blocks.
- ☐ D A hash pointer simply stores the location of data and is the same as a regular pointer used in computer science.
- ☒ E Cryptographic hash offers a one-way function, which makes it very difficult to recover the input of characters.

Question 5

Full credit given 10 / 10

Select all correct statement(s) regarding cryptocurrency

Hide answer choices ^

☐ A

 The original purpose of Bitcoin was to solve the double-spending problem through a decentralized system.

☐ B

 The double-spending problem can be solved by keeping all records at centralized authorities like banks.

☐ C

 Centralized systems are more advantageous than the blockchain structure of cryptocurrency because of its low bookkeeping fees

☒ D

 Cryptocurrency is more immune to hacking, corruption, and technical interruptions than fiat money from centralized systems.

Feedback

Centralized systems like banks charge bookkeeping fees to ensure no double-spending problems in digital currency. But they are prone to hacking, corruption, and technical interruptions.

Question 4

6.66 / 10

Why does the mining difficulty of Bitcoin follow a self-adjusting design? Select all correct answer(s).

Hide answer choices ^

☐ A

 To maintain a steady rate of block creation

☒ B

 To maintain a steady rate of inflation

☐ C

 To reduce the variance of mining rewards

☐ D

 To control the increase of the bitcoin supply

Feedback

The purpose of a self-adjusting design in Bitcoin is to maintain a steady rate of block creation by making the math problems more difficult as more miners join the mining race.

Week 7

✓ Question 1

10 / 10

What are liquidity pools? Select all correct answer(s).

Hide answer choices ^

- ☐ A They allow miners to combine their liquidity power to compete more effectively.
- ☒ B They allow stakers to deposit funds into a smart contract to enable trades of cryptocurrencies on a decentralized exchange.
- ☒ C They are crowdsourced pools of cryptocurrencies
- ☒ D They allow decentralized exchanges to bypass corporate market makers via smart contracts.

 Feedback

Good work

✓ Question 2

10 / 10

Select all correct statement(s) about loan services in DeFi.

Hide answer choices ^

- ☐ A No collateral is needed, unlike borrowing from banks.
- ☒ B A cryptocurrency is used as collateral and people can borrow money against it.
- ☐ C There is no interest charged on loans unlike borrowing from banks
- ☒ D The value of collateral needed is more than what you are borrowing.

 Feedback

Good work

✓ Question 3

10 / 10

Select all correct statement(s) about traditional finance services.

Hide answer choices ^

- ☐ A Centralized banks are immune to fraud and counterfeiting
- ☒ B Banks started to lend money to people and shared the profit to those who deposited gold as an incentive.
- ☒ C Centralized banks serve as intermediaries behind financial services.
- ☐ D People can borrow money directly from other people at a low interest rate through banks.

 Feedback

⚠ Question 4

7.5 / 10

What does the Gamestop incident demonstrate? Select all correct answer(s).

Hide answer choices ^

- ☒ A Decentralized exchanges cannot be shut down by a group of individuals
- ☒ B Centralized exchanges are susceptible to failure
- ☒ C Centralized exchanges have the power to act against traders.
- ☐ D Centralized exchanges can ensure that transactions are true and reliable

 Feedback

When users of the Reddit website subgroup Wall Street Bets began buying up Gamestop shares, the price of the shares skyrocketed. This meant that short-sellers would lose money. To prevent the stock price from rising further, Robinhood and a few other brokers made the controversial decision to restrict its users' ability to purchase GameStop shares. The decision protected Wall Street's short sellers at the cost of retail traders. This showed how centralized exchanges have the power to behave against traders.

✓ Question 5

10 / 10

Select all correct statement(s) comparing centralized and decentralized exchanges.

Hide answer choices ^

- ☒ A In centralized exchanges, buyers and sellers are brought in by market makers.
- ☐ B In decentralized exchanges, the custody of all assets by trusted third parties is necessary for the safety of financial assets in the second step of settlement.
- ☒ C In decentralized exchanges, anyone can access them and trade without intermediaries.
- ☐ D Centralized exchanges must execute transactions as indicated by traders, as shown in the Gamestop incident.

❌ Question 5

6.66 / 10

Alison has just joined a decentralized autonomous organization. What kind of organization can she expect it to be? Select all correct statement(s).

Hide answer choices ^

- ☒ A It is a member-owned community.
- ☒ B Its rules are encoded as a computer program that is often transparent.
- ☐ C The supply and demand are matched by a private infrastructure and managed internally in the stock exchanges' servers
- ☐ D DAO is similar to the ancient banking system where individuals deposited their gold to receive a note indicating how much they had deposited.

Feedback

A decentralized autonomous organization (DAO) is an organization constructed by rules encoded as a computer program that is often transparent, controlled by the organization's members and not influenced by a central government. In other words, they are member-owned communities without centralized leadership.

Week 8

✔ Question 1

10 / 10

Based on the lecture, select all correct statement(s) regarding the characteristics of a successful Non-Fungible Token?

Hide answer choices ^

- ☒ A It must have a unique identifier, like the serial number of physical goods.
- ☒ B The history of ownership transfer should be traceable.
- ☐ C It should be easily manipulated.
- ☒ D It should allow trading between users.

Feedback

Good work

✔ Question 2

10 / 10

Based on the lecture, select all correct statement(s) about trust.

Hide answer choices ^

- ☒ A Trust involves risks or vulnerability.
- ☐ B Once trust is built between a trustor and trustee, the trustor can trust the trustee in all contexts.
- ☐ C Trust is related to pressure to accept actions by other individuals with the ability of the trustor to monitor the others.
- ☒ D Despite best efforts, a trustor may not be able to reduce the possibility of the trustee failing the entrusted task, and yet still trusts the trustee.

Feedback

Good work

✔ Question 3

10 / 10

Eugene spent one month's salary to buy a digital ticket to Blackpink's concert. The ticket is supposed to admit one person only, but he made a copy of the digital ticket for his friend. Both of them gained admission to the concert successfully. Select all correct statement(s) regarding what happened.

Hide answer choices ^

- ☐ A The concert organizer can prevent such duplication of tickets by increasing the ticket price.
- ☒ B This reflects the limitations of digital products, specifically the problem of non-scarcity.
- ☒ C This reflects how non-fungible tokens can increase the cost of duplicating digital products by making such duplication almost impossible.
- ☐ D This reflects why non-fungible tokens and smart contracts are not sufficient to facilitate a full-scale digital economy yet.

Feedback

ⓘ Question 4

7.5 / 10

Based on the lecture, select all correct statement(s) about blockchains and trust.

Hide answer choices ^

- ☐ A We used to use trust backed by a consensus algorithm, but now blockchains allow us to rely on intermediaries for trust, known as lex cryptographia.
- ☒ B Blockchain technology saves us time and effort by informing us about the authenticity of the information, but not the value of the information.
- ☒ C The decreasing cost of trust due to AI calls for the necessity of taking a preventive approach of keeping the information secure by using blockchains.
- ☒ D Lex cryptographia refers to the use of blockchains for trust, backed by a consensus algorithm.

Feedback

We can use trust in blockchains, backed by a consensus algorithm, called lex cryptographia. Although blockchain ensures the authenticity of information, it cannot guarantee the value of such information.

Question 5

10 / 10

Based on the lecture, select all correct statement(s) regarding the fall of the precedents to the metaverse.

Hide answer choices ^

- ☐ A There were many killer apps that killed users in actions during their play.
- ☒ B The platforms could not control copyright issues for digital assets, which made users to question the value of digital assets.
- ☒ C Users' misbehaviors such as trolling and cyberbullying
- ☐ D The network back then could not accommodate the sheer number of users

Question 1

6.66 / 10

Based on the lecture, select all correct statement(s) about trust.

Hide answer choices

- ☐ A For trust to exist, uncertainty needs to be removed.
- ☐ B Trust is dependent on the context of the action taken
- ☒ C Trust is related to willingness to be vulnerable to the actions by someone else in order to achieve some goals
- ☐ D People tend to take steps to reduce uncertainty between trustor and trustee to take an action of trust

Feedback

When a trustor is relying upon a trustee by taking a risk to achieve some goal, it is defined as trust.

Question 1

10 / 10

Based on the lecture, select all correct statement(s) about blockchains and trust.

Hide answer choices ^

- ☐ A We used to use trust backed by a consensus algorithm, but now blockchains allow us to rely on intermediaries for trust, known as lex cryptography.
- ☒ B Blockchain technology saves us time and effort by informing us about the authenticity of the information, but not the value of the information.
- ☐ C The decreasing cost of trust due to AI calls for the necessity of taking a preventive approach of keeping the information secure by using blockchains.
- ☒ D Lex cryptography refers to the use of blockchains for trust, backed by a consensus algorithm.

Question 5

10 / 10

Eugene spent one month's salary to buy a digital ticket to Blackpink's concert. The ticket is supposed to admit one person only, but he made a copy of the digital ticket for his friend. Both of them gained admission to the concert successfully. Select all correct statement(s) regarding what happened.

Hide answer choices ^

- ☐ A The concert organizer can prevent such duplication of tickets by increasing the ticket price.
- ☒ B This reflects the limitations of digital products, specifically the problem of non-scarcity.
- ☒ C This reflects how non-fungible tokens can increase the cost of duplicating digital products by making such duplication almost impossible.
- ☐ D This reflects why non-fungible tokens and smart contracts are not sufficient to facilitate a full-scale digital economy yet.

Question 4

7.5 / 10

Based on the lecture, select all correct statement(s) about secrets

Hide answer choices ^

- ☐ A It is easier to check whether a record of secrets is tampered if multiple people share the record.
- ☐ B Although blockchains keep records from being tampered without permission, the downside of blockchains is that other people can see what the records are without permission because they are shared.
- ☐ C Keeping records secret can be dangerous if such records are shared by multiple parties in blockchains.
- ☐ D Blockchains can solve the irony of secret by distributing secret records to multiple blocks, which is computationally impractical to reverse.

Feedback

Keeping a record secret with a small number of people can be dangerous if such a record is hacked or tampered. In blockchains, one can share a record with multiple others so that the record cannot be tampered without permission, and yet other people without a proper key cannot see what the record is. They can only verify whether the record is tampered or not.

ⓘ Question 3

7.5 / 10

Based on the lecture, select all correct statement(s) about explainable AI.

Hide answer choices ^

- ☒ A It is a set of processes and methods that allow humans to comprehend and trust results generated by AI models
- ☐ B It is used to gain insights into a model and its expected impact but not able to challenge potential biases
- ☒ C Existing neural network models in machine learning allow humans to interpret the results and gain insights into how the outcomes are being derived despite a long machine learning period.
- ☒ D It ensures that blackbox models are not making key decisions based on ambiguous data points

Feedback

explainable AI is a set of processes and methods that allow humans to comprehend and trust results generated by AI models. XAI is used to gain insights into a model, its expected impact, and challenge potential biases. XAI also helps to characterize a model's accuracy, fairness, transparency, and outcomes in AI-powered decision making. And finally, the key toward explainability is to ensure that blackbox models are not making key decisions based on ambiguous data points.

ⓘ Question 4

8 / 10

Based on the lecture, how can machine learning be used to identify students who are struggling in their academic pursuit? Select all correct statement(s).

Hide answer choices ^

- ☒ A Analyze learner data for changing the students' grades
- ☒ B Some tasks include tracking of learning behaviors and detecting performance outlier
- ☐ C Grade prediction can be done more accurately if it is based only on past examination grades
- ☒ D Prediction of dropout is one of the applications of learning analytics
- ☒ E Recommendation system is one possible task in learning analytics

Feedback

Learning analytics involves the measurement, collection, analysis, and reporting of data about learners and their context. Simply put, learning analytics is a set of techniques that analyzes learner data for the understanding and optimization of the learning and the environment. Specific task in learning analytics may include tracking of learning behaviours, detecting performance outlier, predicting dropout and score or a recommender system.

Question 5

7.5 / 10

Based on the lecture, select all correct way(s) to pre-process data (either audio or education data).

Hide answer choices ^

- ☒ A Extracting features from noisy signal
- ☒ B Removal of missing co-curricular records
- ☐ C Extracting the mel-frequency centroid coefficient
- ☒ D Removing erroneous information includes students' demographic data

Feedback

Audio: pre-process the audio data by extracting features from the noisy signal. Typical features include the mel-frequency cepstrum coefficient. Education: first perform pre-processing and feature extraction to obtain the important features. Data pre-processing may involve the removal of erroneous information such as wrong or missing co-curricular records.

❗ Question 3

2.5 / 10

Based on the lecture, select all correct statement(s) about the applications of AI

Hide answer choices ^

- ☐ A In the hotel industry, guests do not feel shy to share otherwise reluctant/hesitant matters with robots.
- ☒ B A deep learning architecture on the Convolutional Neural Network helps live iris scanning for eyeball movement detection.
- ☒ C AI is better in identifying the features of images, such as edges and shapes than humans.
- ☐ D Deep fake technology is not harmful since we are able to assess the genuineness of generated images accurately.

Feedback

AI has been widely used in various industries, ranging from image recognition for immigration clearance to robotics for healthcare and construction.

✔ Question 4

10 / 10

Based on the lecture, select all correct statement(s) about collaborative filtering.

Hide answer choices ^

- ☒ A Collaborative filtering is an algorithm that leverages on historical data of various users.
- ☐ B It assumes that each user has unique preferences.
- ☐ C All data are collected automatically from social network analysis, browsing history, or records of purchases.
- ☒ D Challenges of collaborative filtering include cold start and sparsity.

Feedback

Good work

Question 6

10 / 10

Based on the lecture, select all correct statement(s) about social media algorithms.

Hide answer choices ^

- ☒ A Social media companies make money by selling advertising.
- ☒ B Social media algorithms help advertisers target their ads to the specific target directly.
- ☒ C They handle the tracking and matching of ads.
- ☐ D An experiment showed that TikTok algorithm took a few days to offer sad content when a bot showed its interest in sad content.

Question 6

10 / 10

Based on the lecture, select all correct statement(s) about social media use and eating disorders.

Hide answer choices ^

- ☒ A Most studies are based on observation
- ☐ B Studies have shown that social media usage causes eating disorders
- ☐ C Eating disorder behaviour is negatively associated with some kind of social media usage
- ☒ D Social sciences' approach is to evaluate the validity of conclusion regarding the relationship between social media and eating disorder

Question 5

10 / 10

Based on the lecture, select all correct statement(s) about social media algorithms.

Hide answer choices ^

- ☐ A Social media companies make money by receiving subscriptions from users.
- ☒ B Social media algorithms help advertisers target their ads to the specific target directly.
- ☐ C They cannot collect behavioral data, such as attention duration and engagement, because of the Personal Data Protection Act (PDPA).
- ☒ D An experiment showed that TikTok algorithm took only a few hours to offer sad content when a bot showed its interest in sad content.

Question 4

10 / 10

Based on the lecture, select all correct statement(s) about maintenance.

Hide answer choices ^

A

Alternative maintenance is not to carry out maintenance and fix the problem after a breakdown.

B

Preventive maintenance is to carry out maintenance well in advance.

C

Reactive maintenance is to carry out maintenance right before a breakdown.

D

Predictive maintenance is carry out maintenance optimally, based on data.

Question 3

10 / 10

Based on the lecture, select all correct statement(s) about robots.

Hide answer choices ^

A

Robots cannot be used as a data-collection device since people are reluctant to share their stories with robots.

B

Robots comprise many sensors connected to a cloud.

C

Drones are considered robots.

D

Robots are widely used in the healthcare sector, but not in the retail sector.

Question 2

7.5 / 10

Based on the lecture, select all correct statement(s) about collaborative filtering.

Hide answer choices ^

A

Collaborative filtering is an algorithm that leverages on historical data of various users.

B

It assumes that each user has unique preferences.

C

All data are collected automatically from social network analysis, browsing history, or records of purchases.

D

Challenges of collaborative filtering include cold start and sparsity.

Feedback

Collaborative filtering is an algorithm that leverages on both primary and secondary data, based on the assumption that users with similar profiles would share similar preferences.

Question 1

7.5 / 10

Based on the lecture, select all correct statement(s) about the applications of AI.

Hide answer choices ^

A

In the retail sector, robots roam around on the aisles to collect data on items which are in stock and in large quantity.

B

Robots cannot help retail stores to improve customer experience as they are considered obtrusive.

C

AI is better in identifying the features of images, such as edges and shapes than humans.

D

IoT can help large projects for construction.

Feedback

AI has been widely used in various industries, ranging from image recognition for immigration clearance to robotics for healthcare and construction.

Question 6

10 / 10

Based on the lecture, select all correct statement(s) about social media use and eating disorders.

Hide answer choices

A

 Social sciences' approach is to evaluate the validity of conclusion regarding the relationship between social media and eating disorder

B

 Eating disorder behaviour is negatively associated with some kind of social media usage

C

 Most studies are based on observation

D

 Studies have shown that social media usage causes eating disorders

Question 5

7.5 / 10

Based on the lecture, select all correct statement(s) about the applications of AI

Hide answer choices

A

 One risk of using an image recognition system for security is that a high resolution picture of eyes can be used for iris scanning.

B

 The ecommerce industry uses robotics in their warehouse for data collectors.

C

 Deep fake technology is harmful as it generates fake images without any capacity to check their genuineness.

D

 Image recognition is processed based on inputs comprise pixels and a deep learning architecture on the Convolutional Neural Network (CNN).

Feedback

AI has been widely used in various industries, ranging from image recognition for immigration clearance to robotics for healthcare and construction.

Question 4

10 / 10

Based on the lecture, select all correct statement(s).

Hide answer choices

A

 Diagnosis can benefit from image enhancement by reducing radiation and enhancing resolution.

B

 People get help from chatbots for serious issues, such as legal aids or medical diagnosis.

C

 Real benefit of AI would come when AI can program itself without any human engineer.

D

 Text-to-image generation is harmful since it generates fake images.

Question 3

10 / 10

Based on the lecture, select all correct statement(s) about collaborative filtering.

Hide answer choices

A

 Collaborative filtering is an algorithm that leverages on historical data of various users.

B

 It assumes that each user has unique preferences.

C

 Primary data are collected by directly asking users, while secondary data are collected from social network analysis, browsing history, or purchase records.

D

 Challenges of collaborative filtering include sparsity and scalability due to new users.

Question 2

10 / 10

Based on the lecture, select all correct statement(s) about harmful content on social media.

Hide answer choices

- ☐ There are laws regulating potentially harmful content on social media in many countries.
- ☒ The First Amendment in the US Constitution is about freedom of expressions, which is a basis for legal immunity for social media platforms.
- ☐ Social media platforms have successfully removed harmful content using AI.
- ☒ Social media companies have enjoyed protections against legal liability for any content that users post on their platforms in the US
